

With over 10,000 employees distributed across 35 countries, Red Hat, Inc. is an American multinational software company providing open-source software products to the enterprise community. Red Hat, founded in 1993, has its corporate headquarters in Raleigh, North Carolina and has 85+ offices located across 4 continents.

The Challenge

With more than 3,500 remotely distributed software developers, Red Hat needed one common system that would allow them to bring all of their employees into their corporate communications infrastructure.

The Solution

eZuce's Uniteme open software defined unified communications platform enabled all Red Hat employees to communicate via the corporate communications system. Red Hat was able to reduce their number of servers from thirty to five due to Uniteme's flexible software solution.

The Benefits

- One communications platform
- Centrally managed
- Highly cost effective
- Reduced hardware & support
- Team collaboration
- Virtual office environment

We were able to replace a legacy PBX system that required 30 dedicated servers with an open, flexible software solution deployed on just five servers. We estimate that the cost savings in hardware, support and licensing over the next two years will cover the entire cost of deploying eZuce, even though we will add hundreds of new users each year.
