

Metropolitan Interactive Videoconferencing Network (MIVNET) is one of the most competitive cloud-based meeting service providers catering to large and small business with popularity in the legal services market. MIVNET is currently represented in about 200 locations and always welcomes new subscribers. MIVNET also offers a Free trial. For more information call 800.464.8638.

## The Challenge

MIVNET wanted to migrate subscribers to a next generation cloud-based video collaboration and conferencing solution to provide more than what traditional hardware based solutions were offering. It was important to seamlessly deliver reliable, robust video connections while giving subscribers the freedom to choose the features and advertising options that meet their individual needs. MIVNET was intent on delivering a secure and reliable cloud to serve one specific purpose: video meetings. Additionally, a modern and unique user interface was important to the savvy, tech-inclined millennial legal community.

## The Solution

MIVNET Connect, powered by eZuce's Vibe video collaboration solution, enables an automated pay-as-you-go H.323 connectivity portal as well as a virtual meeting option for non H.323 participants. Vibe's cloud-based solution allows MIVNET subscribers to log in and build virtual meeting rooms and invite attendees using Windows, Mac and Linux desktops, Android and iOS devices as well as any WebRTC capable browser. Additionally, traditional SIP or H.323 enterprise video conference hardware can connect to any meeting. MIVNET was able to efficiently build and enable their entire user base by leveraging eZuce's Managed Service Provider tools. Vibe goes above and beyond the ordinary conferencing solutions offered by most other providers.

## The Benefits

- Mobility with high-quality video streaming
- Create and attend meetings within seconds
- Privacy and security, no trespassing by uninvited third parties
- User friendly interface
- SIP calling and playing video/audio files during meeting
- Group and private chat
- Multiple user screen sharing
- Real-time global team collaboration with face-to-face communications
- Incorporate AI including services like captioning and speech recognition, virtual assistants and other services seamlessly into meetings

Vibe is truly a meeting experience unlike most others and exceeds speculative opinion of what features a meeting should have. Lawyers love the ability to conduct a sidebar, record, chat, and integrate their discovery media via the cloud.
